
Core Field Manual

Part 3 Soldier

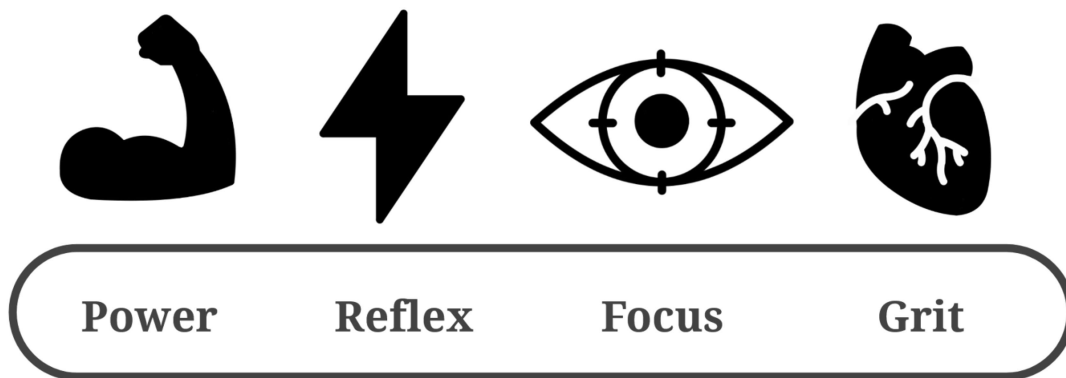

Personal Record

Before you can deploy for combat, you must have a firm understanding of who you are, what your strengths are, and what your role on the battlefield will be. Refer to the Personal Record at the back of the manual.

Ability Score Distribution

First, determine your physical qualifications and mental aptitude. This will be critical to your effectiveness on the battlefield. In Cannon Fodder Abilities are broken into four scores.

A score of zero represents ordinary ability, while a negative score is deficient, and a positive score is proficient.

Power (P) — Your strength, endurance, and health. In game, this ability affects melee combat, HP, and carrying capacity.

Reflex (R) — Your dexterity, balance, and reflexes. In game, this affects short range shooting, reaction speed, and stealth.

Focus (F) — Your acuity, perception, and precision. In game, this affects long range shooting, scouting, and throwing accuracy.

Grit (G) — Your sanity, bravery, and determination. In game, this affects Suppression resistance, handling injury, and healing.

Start by choosing an Ability Score Set from the table below. All score distributions have a net score of +5, with a maximum individual ability score of +4 and a minimum of -2.

All Potential Ability Score Distribution Blocks

Set 4	Block 16 (4)	+4	+4	-1	-2
	Block 15 (3)	+4	+3	0	-2
	Block 14 (2)	+4	+3	-1	-1
	Block 13 (1)	+4	+2	+1	-2
Set 3	Block 12 (4)	+4	+2	+0	-1
	Block 11 (3)	+4	+1	+1	-1
	Block 10 (2)	+4	+1	+0	+0
	Block 9 (1)	+3	+3	+1	-2
Set 2	Block 8 (4)	+3	+3	+0	-1
	Block 7 (3)	+3	+2	+2	-2
	Block 6 (2)	+3	+2	+1	-1
	Block 5 (1)	+3	+2	+0	+0
Set 1	Block 4 (4)	+3	+1	+1	+0
	Block 3 (3)	+2	+2	+2	-1
	Block 2 (2)	+2	+2	+1	+0
	Block 1 (1)	+2	+1	+1	+1

First, choose a Set 1-4 from the table above. Once a Set has been chosen, roll 1d4 to determine your specific score Block. You may then allocate each score to an Ability of your choice. Alternatively, your GM could allow you to pick a Block outright.

Note that score sets 3 and 4 will offer superior performance at the cost of more punishing negative scores, where you may have to rely on teamwork to compensate for any shortcomings. Conversely, sets 1 and 2 may be preferred by a more independent warrior coming at the cost of losing some specialization.

Health

Health, or HP, represents your physical condition and is tracked in your Personal Record. There are important HP thresholds as seen in the chart below.

At some thresholds, a **Bleed** status effect occurs. While bleeding, you take 1d6 damage at the end of each of your Turns. An ally within Point Blank range can spend an Action to stop the bleeding. You can also spend two consecutive Actions to stop your own bleeding. This can be done between Rounds and prevents bleed damage at the end of your Turn.

You also have a Restorable HP which is $10 + 2 \times \text{Grit score}$ and represents the amount of health you can recover without a Rest or Revitalization.

Healthy • Your HP or hit points are 20 + Power. • A negative Power will lower your max HP below 20.
Downed • If you fall between 0 and -10 HP, you are downed. ◦ You are stuck in the Prone stance and can only use guns with a Heft Score of no more than 1, or gear that is 2 Equipment Slots or lower (see <u>Stances & Visibility</u>). ◦ Additionally, you begin to bleed. The effect does not stack if you are already bleeding.
Knocked Out • If you fall below -10 HP, you are dying. ◦ At the start of your Turn, make a Grit Check to stay conscious. ◦ The DC is the magnitude of your negative HP, so -12 health requires a DC 12 Grit Check. ◦ If you fall unconscious, you can't take any Actions or Reactions unless brought back to positive health by a source of healing. ◦ Additionally, you begin to bleed, the effect does not stack if already bleeding.
Death • At a health of -20 and below, you are dead. Re-roll a character or call it a night

Inventory

Equipment plays a pivotal role in a soldier's effectiveness and survival. From weaponry and body armor to grenades and medical supplies, properly managed gear can give you a significant advantage when surviving in the harsh and unpredictable environments of battle.

Your total carry capacity is accounted for by your Inventory, measured in Equipment Slots (EqS), which represents the total load burdening you. An unlimited number of items can be stored in your Inventory, however their total Equipment Slots can incur effects at different thresholds.

Light-Footed

- Carrying **10 Equipment Slots or less** means you are Light-Footed.
- While Light-Footed, your base movement speed is increased to **6 Spaces per Action**.

Standard Inventory

- Your standard inventory is **between 10.5-15 Equipment Slots**.
- This range has no effects.

Encumbered

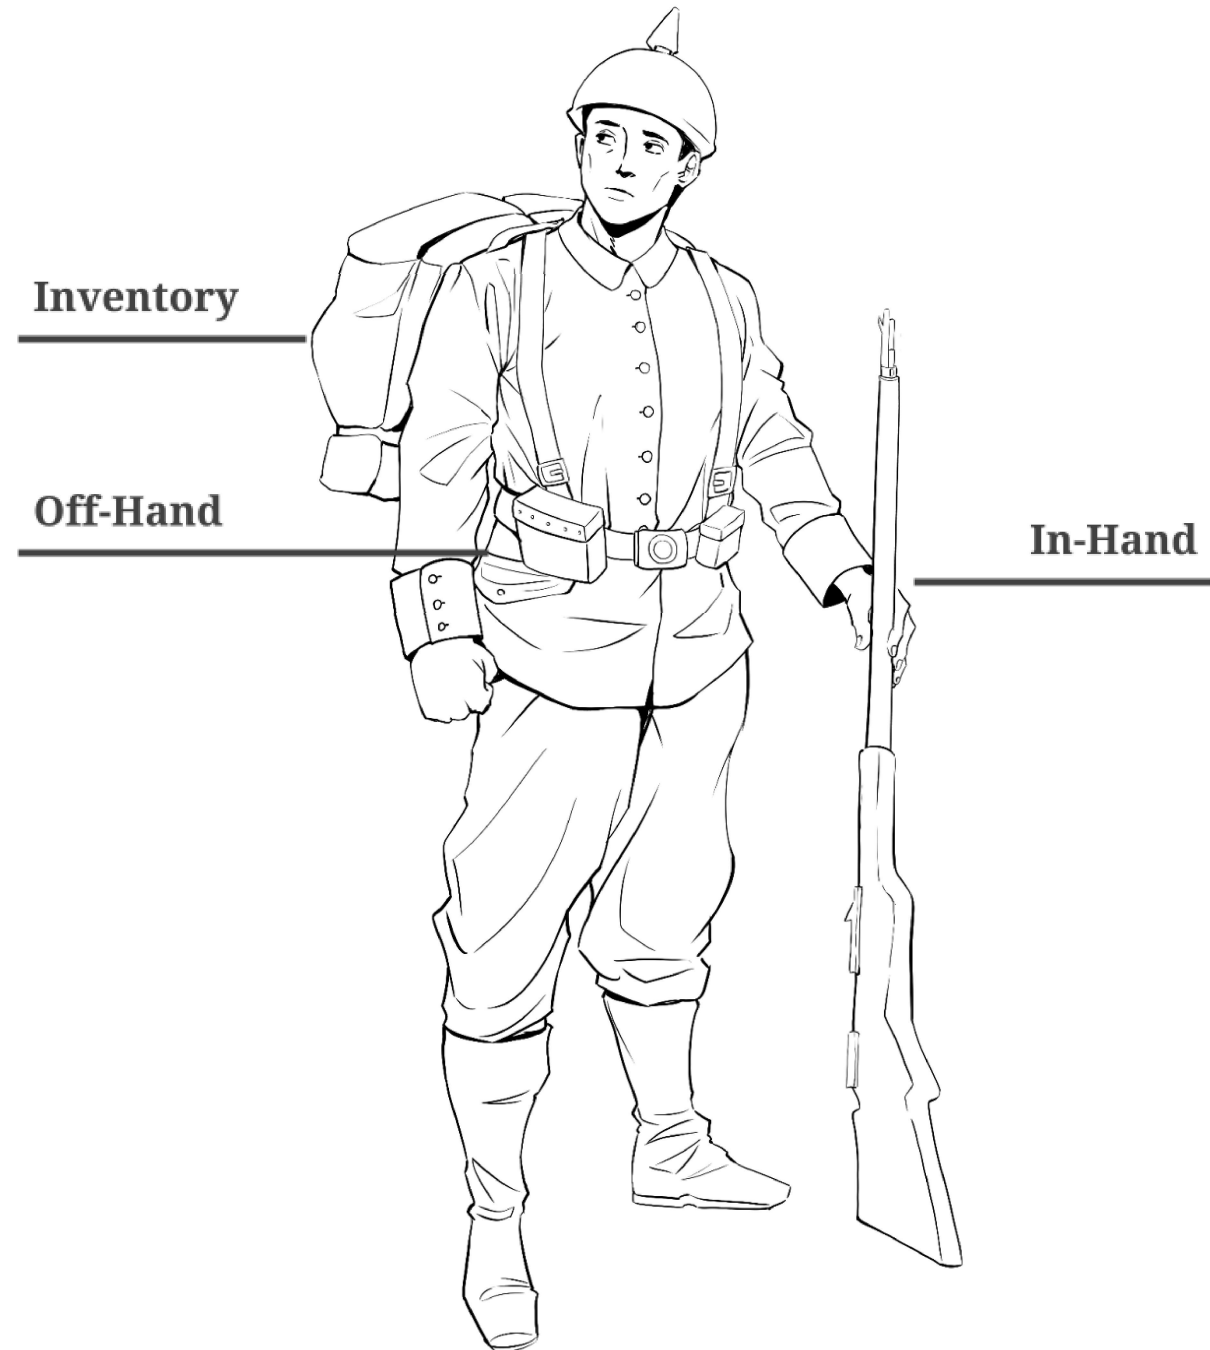

- At **between 15.5-20 Equipment Slots**, you are Encumbered.
 - You no longer gain the speed bonus from the Standing stance.

Lugging

- Beyond **20 Equipment Slots**, you can carry up to $25 + 2 \times \text{Power Score}$ of Lugging EqS (Negative Power does **not** reduce your Lugging capacity).
 - Your movement is reduced to **4 Spaces per Action** (does not affect Prone).
 - All Checks are at Disadvantage including attacks.
- You are unable to carry anything above your Lugging capacity.

In-Hand & Off-Hand

Accessing the supplies you've packed is just as important as packing itself. Your In-Hand and Off-Hand are how you can equip items from your inventory during battle. What can be In-Hand or Off-Hand is limited by the number of items instead of the number of Equipment Slots. Note that the items stored in both In-Hand and Off-Hand still count towards your total Inventory Equipment Slots.

In-Hand represents what you are actively manipulating. Unless otherwise specified, all items must be In-Hand to use. Additionally, all equipment is assumed to be Two-Handed unless it is the Pistol or Revolver weapon type, is ammunition, or has been specified otherwise.

In-Hand Item

Weapon _____				Ammo _____		
PB	CL	SH	MD	FR	DT	EX
To-Hit: 1d20 + Distance + Ability + Prone - Enemy Cover						

Your Off-Hand is portable equipment you've specially set aside in an easy to access location for rapid use. By default, you can have up to 5 Off-Hand items, but this can be expanded by a Utility Belt or Utility Vest. You can spend an Action to fill an Off-Hand slot, and supplies in your Off-Hand can be brought In-Hand instantly. For example, throwing a grenade from your Inventory would require 1 Action to bring In-Hand and an additional Action to throw, but a grenade from your Off-Hand can be thrown in a single Action (See [Drawing & Stowing](#)).

An object can only be stored in your Off-Hand if it is labeled as One-Handed, is a Pistol or Revolver weapon type, or is 0.5 Equipment Slots. If there is more than one object per 0.5 EqS, you can store all objects as a single Off-Hand Item, such as 3 Magazines for 0.5 EqS.

Off-Hand Items

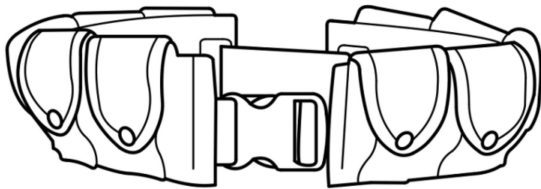

Off-Hand items must be either:
 One-Handed, a Pistol, or 0.5 EqS

Default					
Utility Belt					
Utility Jacket					

While you are expected to have a basic belt or bandolier on you, which is represented by your Default Off-Hand, the Utility Belt is going out of your way to store additional items. This should not be considered standard gear as the size and weight of the belt presents a genuine trade-off that a soldier should consider.

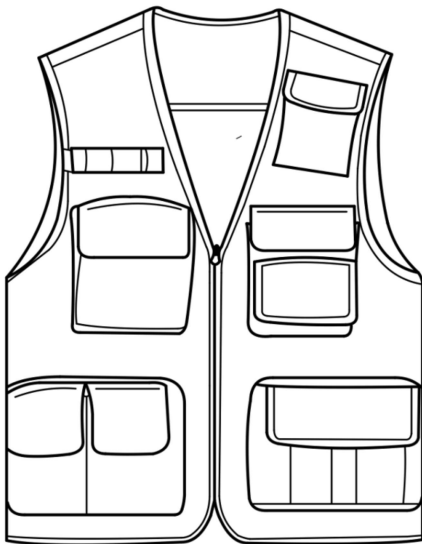

Utility Belt

- Equipment Slots: 2
- Increase Off-Hand by 3 Items
- Can not use more than one Belt

The Utility Vest is only for those soldiers that need to access a great deal of equipment rapidly. Slot per slot, it is less EqS efficient than the Utility Belt, however it offers further Off-Hand capacity.

Utility Vest

- Equipment Slots: 4
- Increase Off-Hand by 4 Items
- Can not use more than one Vest

Note that you can not equip more than one Utility Belt or Utility Vest at a time. However, you can equip both the Belt and Vest at once.
