Part 5 Defense & Survival

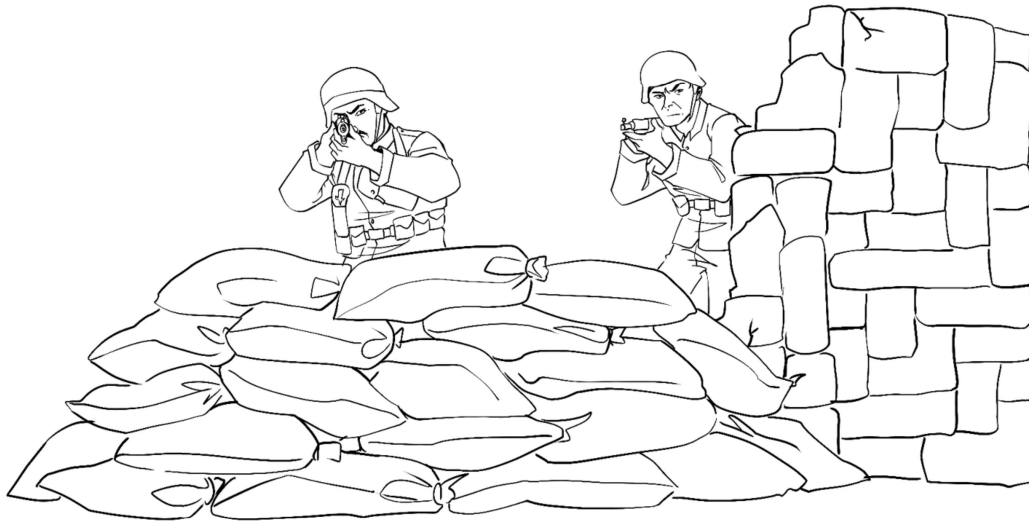

Stances & Visibility

How you situate yourself in battle is vital to your survival. Stances and Visibility can add penalties to your attackers To-Hit rolls keeping you alive.

A Stance is how you have positioned yourself during your Action. You can change your stance instantly once per Turn at either the beginning or end of an Action with one exception — getting up from Prone takes 1 Action.

Stances	
Standing	• Enemies get +2 To-Hit against you. • +1 Space per Movement Action.
Kneeling or Crouching	• Enemies get +0 To-Hit against you. • This is your default battle stance and if no stance is specified, you are assumed to be crouching.
Prone	• Enemies get -3 To-Hit against you. • +2 To-Hit at Focus ranges. • Movement reduced to Creep of 3 Spaces per Action. • Takes 1 Action to get out of Prone. • Half damage from Shrapnel damage.

Visibility is distinct from Stances and is conditional depending on your attacker's view of you. Gaining the effects of a visibility condition does not count as a Stance change.

Visibility	
Cover	• Enemies get -2 To-Hit against you (or more at GM's discretion). • Protection must not be penetrable by an attacker. • Protects up to 90° off of direction of cover.
Concealment	• Enemies get -1 To-Hit against you. • Cover that can be penetrated by an attacker.
Moving	• Enemies get -2 To-Hit against you (or greater, see <u>Special Targets</u>). • Only applies if both Actions of the previous Turn were movement Actions or during a Reaction Contest if it interrupts a Movement Action.
Full Cover	• Your location is known, but you cannot be hit. • You can still be suppressed if your Space is targeted • Being in Cover then deciding to duck down to Full Cover counts as a Stance change.
Full Concealment	• Full Cover that can be penetrated by an attacker • Enemies get Disadvantage To-Hit against you.

Reaction

When in the heat of battle, you only get a split second to respond to danger. There are two types of **Reaction** which allow you to perform a single Action from another Turn outside the normal Initiative order. A Held Reaction allows you to postpone an Action to happen on a trigger and a Survival Reaction allows you to respond to something immediately at the cost of your next Turn.

When a Reaction is triggered, a Reaction contest may occur to see who's Action completes first. In a contest, both parties roll $1d20 + \text{Reflex}$. The roll for a person whose Reaction was triggered is called a **Reaction Check**, while the roll for the person whose Turn is interrupted is the **Opposing Reaction Check**.

If the Reaction Check roll beats the Opposing Reaction Check roll, the Turn is interrupted, stopping movement at the Space the Reaction was triggered. If the Opposing Reaction Check roll succeeds, the Action completes and the person who's Reaction was triggered can choose to use their Reaction after the Action. For multiple parties, resolve the Actions from highest to lowest in the Reaction contest.

There are two types of Reaction:

- Held Reaction
 - You hold a single Action from your Turn to react to a specific trigger, such as targets coming into view or a signal.
 - If the trigger does not occur by your next Turn, the Action is lost.
 - Held Reactions only trigger a contest if the Opposing Reactor can, at the GM's discretion, reasonably perceive the triggered Action. Additionally, if the Reaction interrupts movement, the contest is only triggered if the Opposing Reactor was **Creeping**.
 - Examples of a Held Reaction include holding a corner in close-quarters combat or a sniper waiting for their target to present themselves.
- Survival Reaction
 - At any point after establishing Initiative, you may spend your entire next Turn to interrupt the current enemy's Action with an Action.
 - A Survival Reaction will always trigger a contest regardless of **Creeping**, unless the Opposing Reactor cannot reasonably perceive the triggered Action.

Suppression

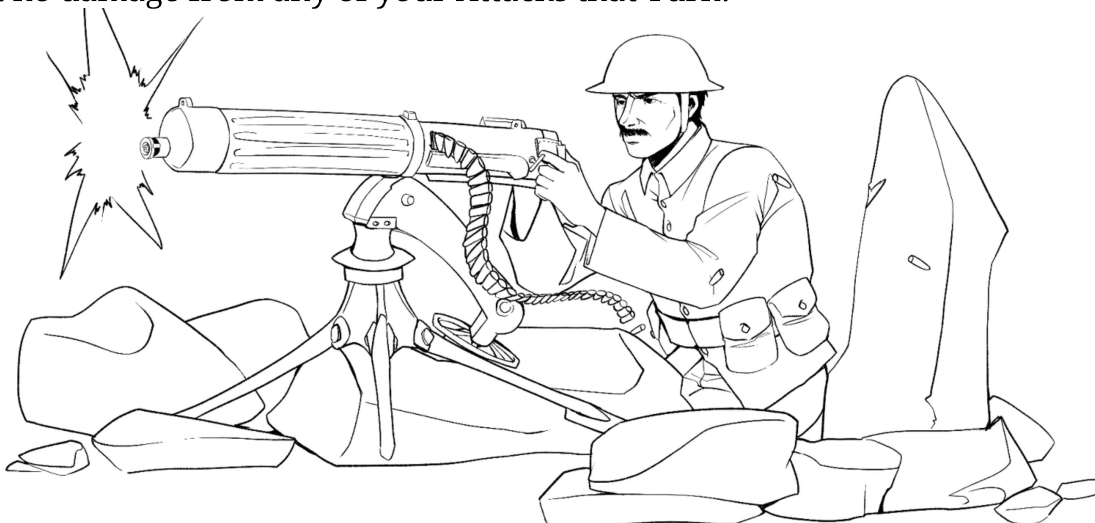

Heavy fire keeps the enemy's heads down and disrupts their ability to fight. After a full Turn of shooting Automatic or Burst Attacks at a single target or the Space that the target is within, the target must make a Suppression Check by rolling $1d20 + \text{Grit}$. The **Suppression Check** DC is determined by the damage dice and number of Extra Attacks used in both Actions shown in the table below.

If failed, the target is Suppressed for their entire next Turn. Suppressed targets suffer from the following penalties:

- Disadvantage for all Checks and Attacks
- Movement Actions are limited to a Creep of 3 Spaces of Movement
- Prone targets cannot make Movement Actions

Damage Dice	0-1 Extra Attacks	2-3 Extra Attacks	4-6 Extra Attacks	7-10 Extra Attacks	11-14 Extra Attacks	+15 Extra Attacks
2d4	DC 10	DC 11	DC 12	DC 13	DC 14	DC 15
2d5	DC 10	DC 12	DC 14	DC 16	DC 18	DC 20
2d6	DC 12	DC 14	DC 16	DC 18	DC 20	DC 22
2d8	DC 13	DC 15	DC 17	DC 19	DC 21	DC 23
2d10	DC 14	DC 16	DC 18	DC 20	DC 22	DC 24

You cannot suppress a target if your To-Hit modifiers sum up to -10 and you dealt no damage from any of your Attacks that Turn.

Personal Armor

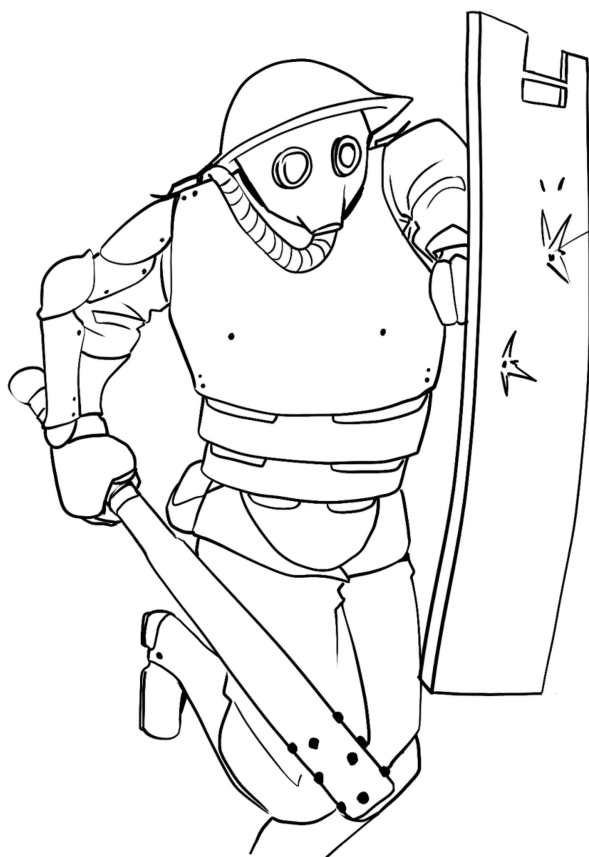

Armor is your last line of defense and could be the deciding factor between life and death. Armor Rank (AR) and Armor Penetration (AP) are competing values on the same ranked scale, where Armor Rank defines how resistant something is to being penetrated and Armor Penetration defines how well a weapon penetrates.

Personal armor has three properties: Durability, Coverage, and Armor Rank.

- **Durability** is the number of Damage Dice the armor can take before failing, regardless of Dice size.
- **Coverage** represents the area of bodily protection. Each attack, including Auto Extra Attacks, incurs a Coverage die roll. **Rolling above a 3** with your coverage die means the armor is hit and takes the damage, while rolling 3 or below means the attack hits the player instead.
- **Armor Rank**, if hit, determines if the attack penetrates the armor.
 - If your Armor Rank is **less** than the attacker's Armor Penetration, the armor AND you take damage.
 - If your Armor Rank is **equal** to the attacker's Armor Penetration, the armor takes the damage.
 - If the Armor Rank is **above** the attacker's Armor Penetration, the armor and you take no damage unless otherwise specified.

There are also 4 types of wearable armor: Helmet, Body Armor, Mask, and Shield. Each protects against different types of damage. If multiple armor types overlap on what they cover, the defender rolls with the Armor with the highest Coverage and can choose which Armor's Durability is affected. The AR system also extends beyond just personal body armor; encompassing terrain, vehicles, and anything that could potentially stop a bullet.

Helmet	Body Armor
Protects Against • Blunt Melee damage • Shrapnel damage • Double Ballistic damage	Protects Against • All Melee damage • Shrapnel damage • 1x Ballistic damage • ½x Ballistic damage
Mask	Shield
Protects Against • Edged Melee damage • Shrapnel damage • 2x Ballistic damage	• Acts as Cover • Parry with Advantage

Shields are a special case, acting as mobile cover following cover rules. A Shield will consume durability if the attack misses the player but rolls a 6 or above. The user must specify the Cardinal Direction the shield is pointing, or it will default to the last Cardinal Direction the player moved or shot in.

Extraction

Carrying or dragging a downed soldier is often a terrible inevitability in combat, but vital to the survival of you and your team. You can transport a person with one or both hands as long as you are within Point Blank range. Dragging with a single hand allows you to use One-Handed items, such as pistols or grenades, however it restricts your movement to a Creep of 3 Spaces per Action. Moving a person with both hands puts you in the Lugging category regardless of current equipment and equipment on the person being carried.

If the soldier is conscious, they can use One-Handed equipment while being carried, adding a -2 movement penalty To-Hit as if riding in a vehicle.

“War stirs in men's hearts the
mud of their worst instincts.”
- Charles de Gaulle
