Part 6 Firearm Management

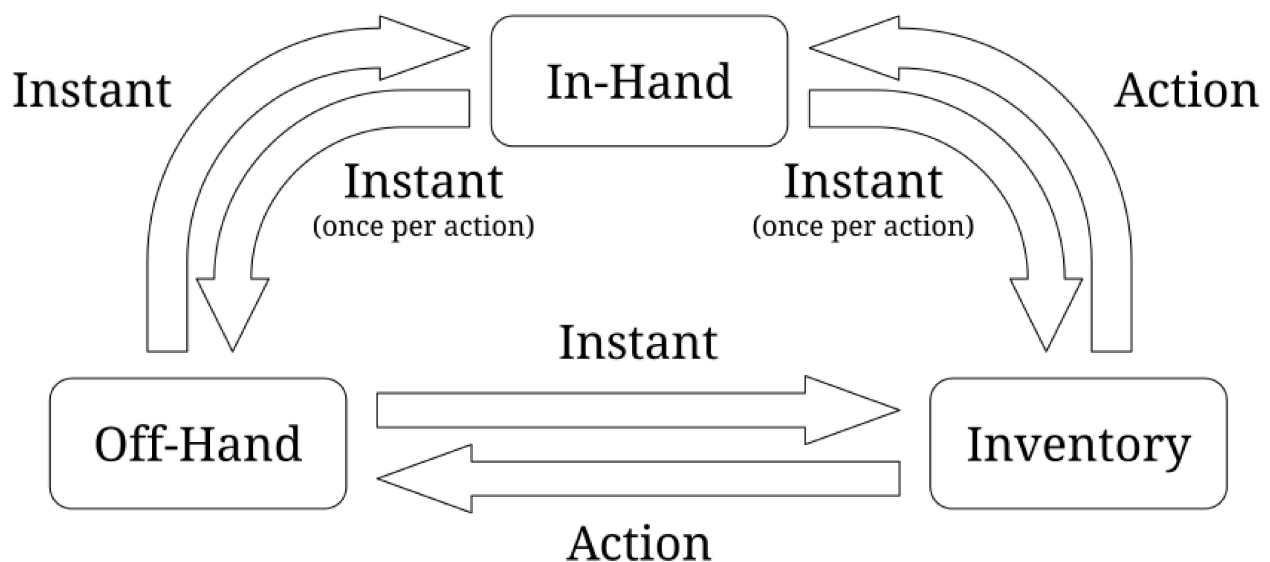

Drawing & Stowing

Moving a weapon or item between your inventory, Off-Hand, or In-Hand is vital to making sure you have the right tool for the right job at the right time. Items and weapons can be drawn instantly from the Off-Hand but drawing from your Inventory to your Off-Hand or In-Hand takes an Action (see In-Hand & Off-Hand rules).

Stowing items or drawing items from external sources such as handing off, picking up, and dropping weapons or items is instant, but can only be done once per Action. For example, you can not drop and pick up an item in the same Action.

You can either instantly draw up to two items at once from your Off-Hand or with one Action from your Inventory.

Deploying

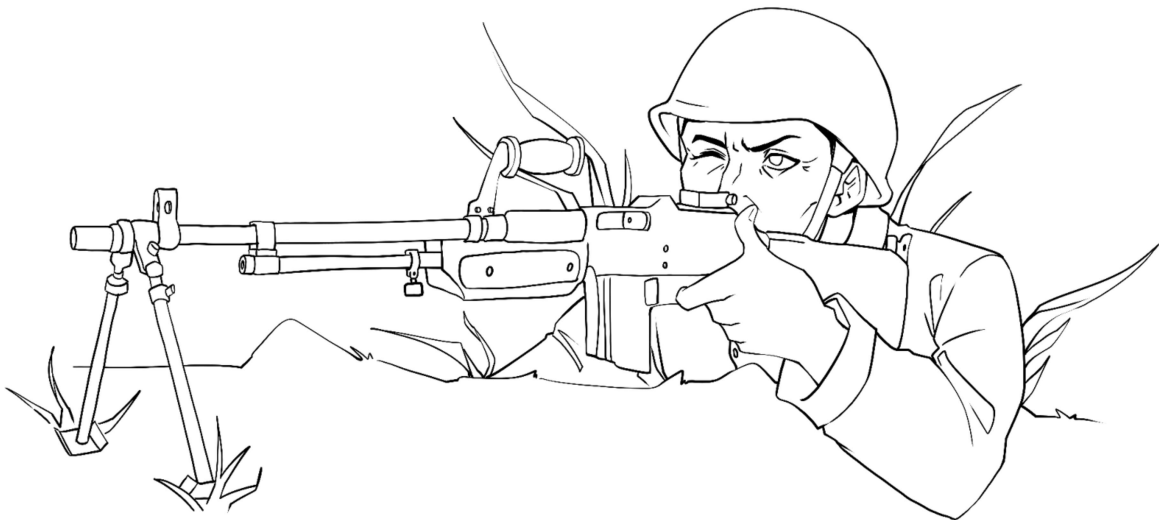

Machine guns and other deployable weapons have a field of view of 180° centered along the Cardinal Directions, as described in [Battlefield Terminology](#). Additionally, many heavier weapons may need to be deployed to use effectively. There are two types of deployable mounts: Bipods and Tripods.

Bipod

- Takes one Action to deploy
 - You can rest the gun on cover, such as sand bags or low walls.
 - If nothing is available to rest the gun on, you can fall into the Prone Stance to deploy anywhere.
 - While Prone, you can move at Creep speed and remain deployed.
- Instant pick-up
 - An Action is required to get out of Prone (see [Stances & Visibility](#))

Tripod

- Takes one Action to deploy
 - When deployed, your Stance must be either Kneeling or Prone, and you are unable to move the mount until packed.
- Takes one Action to pack
 - Being in the Prone Stance means you need 1 Action to get out of Prone and 1 additional Action to pack the Tripod.

Weapon Reload

Keeping yourself alive means keeping your gun loaded. Every gun has a listed Magazine Size which represents the ammo capacity of the weapon. With the exception of loading individual bullets and Clips, all Magazines, Speedloaders, Belts, Drums, and Pans will fully reload the gun.

Magazine Size Standard Magazine	30 Bullets 2 Mags per 0.5 EqS
---	---

Loading your gun takes 1 Reload Action. However, ammo in your Inventory and not your Off-Hand will take an additional Action to retrieve. So when you can, you'll generally want to keep ammo ready in your Off-Hand. Recall from the Off-Hand section that you can store multiple Magazines, Clips, Bullets, or other ammo loading items per Off-Hand Item if it is within 0.5 EqS. Consequently, ammo that is 1 or more EqS such as some Belts, Drums, and Pans will take 2 Actions to reload: 1 for drawing from inventory and another for loading.

You can perform a Reload Action during a movement Action. However, doing so will prevent you from using any other Traits or Abilities during this movement Action. Additionally, unloading a weapon counts as a Reload Action if you want to retain the ammo, otherwise it is instant. Swapping ammunition types requires first unloading and then loading new ammo.

Aiming Action

By spending time aiming, you can improve the accuracy of a critical shot. Spend an Action to steady your aim on a target or a Space where you expect your target to be, and get +1 To-Hit. You can stack consecutive Aiming Actions to a maximum of +3 To-Hit unless otherwise stated. These special effects are lost if you stop aiming, move, or are forcibly moved for any reason. An attack using the Aim bonus cannot use Extra Attacks or be Hip-Fired.

Hip-Fire

Hip-Firing is the catch-all term for any style of shooting that doesn't involve aiming down a sight, which can mean "gangster" shooting a pistol or "Rambo-ing" a machine gun. Hip-Firing applies a -1 To-Hit per Space from the target. Without certain Traits, Hip-Firing only applies a penalty and a good soldier should always attempt to fire normally.

Dual Wielding

Recall that all equipment is assumed to be Two-Handed unless it has the Pistol or Revolver weapon type, is ammunition, or has been specified otherwise. You can wield two One-Handed items without a penalty as long as they are used on separate Actions.

If you attempt to attack with two One-Handed weapons or use two One-Handed items in one Action, you suffer both a -3 To-Hit penalty and roll with Disadvantage on both To-Hit rolls. If you are attempting to fire a Two-Handed weapon with a single hand, you incur the Hip-Fire penalty. These effects will stack if you try to dual wield two two-handed weapons, even with the Dual Wielding Trait.

Heft Score

Heft is specific to your gun, and a higher Heft score represents a more unwieldy weapon. Because close-quarters combat is more difficult for cumbersome firearms, the Heft score penalizes ranges using Reflex. While these penalties are baked into the gun stat blocks, you may need to recalculate it if you are modifying the weapon by referencing the table below.

Heft	Point Blank	Close	Short
0	10	5	3
1	8	5	3
2	8	4	3
3	6	4	3
4	6	4	2
5	4	4	2
6	4	3	2
7	2	3	2
8	2	2	2
9	0	2	2
10	0	1	2
11	-2	1	2
12	-2	0	2
13	-4	0	2
14	-4	-1	2

Be aware that other modifications from attachments and barrel length apply on top of these values.
