
Core Field Manual

Part 8 Out of Combat

Conversing

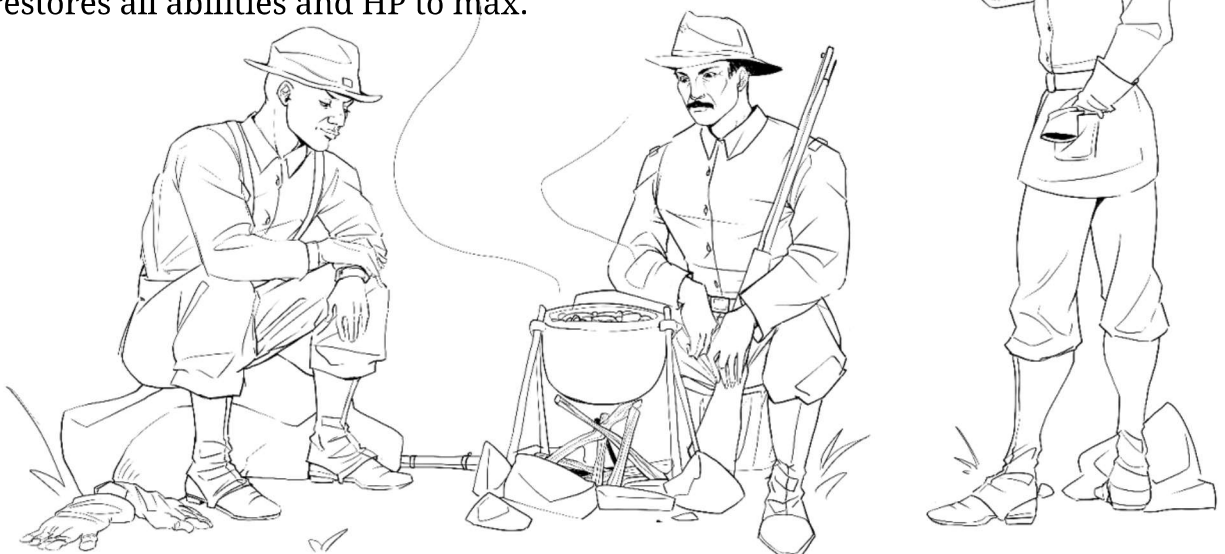

Almost all talking with NPCs and other players' characters can be done through pure roleplay and does not require an Action or dice. However, if a more combative dialogue takes place such as lying or interrogating, the GM may require a Check of relevant Ability Score. For additional, optional rules and checks, see Optional Roleplay Abilities & Skills.

Rest & Revitalization

Between combat, you are able to recover abilities and health. This break can either be considered a **Rest** or a **Revitalization** depending on its length.

A **Rest** represents a break from the combat, but not the larger operation. At the discretion of the GM, a Rest can be the equivalent of a lunch break or a full night's sleep. A Rest replenishes your HP and Restorable HP by $2d4 + \text{Grit}$ or by a minimum of 5. Healing from the Rest doesn't expend Restorable HP. However, using any consumables during the Rest will still draw from your Restorable HP. You can use consumables both before or after applying the healing due to a Rest.

A **Revitalization** is a recovery completely removed from danger. At its shortest, this could represent a full night's rest, however, at the GM's discretion, it might be much longer. A Revitalization restores all abilities and HP to max.

Optional Roleplay Abilities & Skills

Sometimes the four base Ability scores may not be enough to satisfy more complex roleplay needs. As an optional ruleset, a GM may adopt two more roleplay centric Ability Scores. These new Ability Scores have no in-game effect so it is up to the GM to make them relevant through creative situations beyond the scope of this Manual.

Wits (W) — Your reasoning, judgment, and technical prowess.

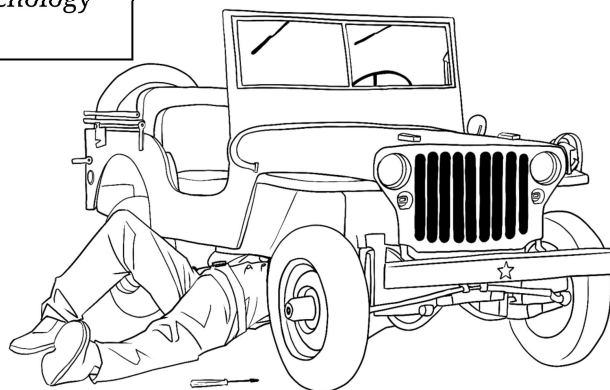

Social (S) — Your charisma, personality, and impression on others.

By combining Ability Scores, more nuance can be applied to Checks. These special Checks are called **Skill Checks** and come in an infinite variety only limited by player and GM imagination and interpretation.

Skill Checks are distinct from normal Checks as you combine two Ability Scores, rolling 1d20 + two Ability Scores. The GM should rebalance their check DCs with these higher modifiers in mind. If appropriate, Skill Checks may use the same Ability twice.

Example Skills

	Social	Wits	Grit	Focus	Reflex
Power	Posture	Wrangle	Endurance	Heavy Tools	Athletics
Reflex	Performance	Light Tools	Survival	Acrobatics	
Focus	Deception	Technology	Psychology		
Grit	Leadership	Wisdom			
Wits	Negotiation				

Optional Expertises

To further expand roleplay and add depth to character backgrounds, the GM may allow players to have one or more Expertises. An Expertise is a specific Skill that a character possesses, being derived from their profession or something innately special about them. A character performing their Expertise can auto-succeed easier Checks, be given Advantage on normal Checks, or attempt otherwise impossible Checks.

There is no limit to what Expertises a character could have but they should follow these guidelines:

- Use two Abilities (similar to Skills).
- Be purely roleplay with no impact on the base rules, particularly combat.
- Be specific enough to not be abused (as determined by GM).
- Be unique enough to not already be a common skill (as determined by GM).

Below are some example Expertises:

Equestrian [Reflex — Focus]:

You auto-succeed riding Checks, and are able to attempt stunts.

Gambler [Focus — Social]:

You roll with Advantage when playing card games.

Powerlifter [Power — Power]:

You have Advantage when performing feats of great strength, and are able to attempt lifting things normally impossible. This Expertise would not affect any Power Checks from the base rules.

Computer Hacker [Focus — Wits]:

You are able to attempt computer hacking Checks.

Cook [Focus — Grit]:

You auto-succeed cooking the average meal and you have Advantage preparing lavish delicacies.
