The Smith & Wesson M&P (Military and Police) is a widely used handgun as its lightweight modern polymer construction makes the sidearm ideal for self-defense and customization. Introduced in 2005, the M&P pistol has seen service with a wide variety of police forces and is a favorite pick for many in the civilian market.

Introduced in 2014, the SIG P320 is one of the first handguns to incorporate a fully modular chassis system, allowing for easy customization of grip, size, and frame, as well as caliber conversion. The P320 quickly gained popularity in both civilian and military circles. It achieved particular fame when it won the U.S. Army's Modular Handgun System (MHS) competition in 2017, becoming the M17 and M18 (compact) pistols, standard issue sidearms for American soldiers.

Heckler & Koch HK45

Starting production in 2006, the HK45 was originally developed for the U.S. military to replace the aging M9 Beretta with a pistol chambered in 45 ACP. While the program was ultimately canceled for budgetary reasons, Heckler & Koch turned to the civilian and law enforcement markets for further sales, where the gun saw major success.

Developed in conjunction with the FN P90, the FN Five-seveN uses the unique 5.7x28mm ammunition which has a more slender diameter, allowing for more bullets to be packed into the magazine. In 2003, NATO conducted testing to find a replacement for the 9x19mm standard. While politics ultimately shut the program down, the FN Five-seveN has been adopted by over 40 countries around the world, serving with military and police forces.

Adopted in 2003 with the Russian military, the MP-443 or Yarygin Pistol 443 was meant to become the standard issue sidearm of all Russian military and law enforcement branches. While intended to replace the Makarov pistol, due to budgetary constraints, only limited numbers were supplied to special forces units until as late as 2016.

A shortened version of the M16A2 rifle, the M4 Carbine was developed from the lessons learned by the early CAR-15 carbines in the Vietnam War. Initially seeing action in Kosovo in 1999, by 2005 the U.S. Army largely replaced the M16A2 during Operation Enduring Freedom and Iraqi Freedom with the USMC fully adopting the carbine in 2015. While the M4 was initially deployed with semi-auto and burst fire, the M4A1 allowed for fully automatic fire.

Developed in the 1990s at the request of U.S. Army's Delta Forces for an improved CQB carbine, the HK416 derives its design from the M4 and other AR-15 class rifles while using the short-stroke gas piston system of the G36 rifle. Going into the 21st century, the rifle has become widely adopted by multiple countries including Ireland, Norway, Germany, and the U.S. where it was used to kill Osama Bin Laden.

The Special Operations Forces Combat Assault Rifle (SCAR) was developed by FN Herstal in 2004 to satisfy SOCOM requirements for a highly modular and ergonomic multi-caliber rifle. After initially being deployed in 2009, the U.S. canceled its order for the Light variant of the SCAR (designated MK 16) due to insufficient improvements compared to contemporary 5.56x45 platforms like the M4 Carbine. Despite the setbacks, the SCAR-L would be adopted around the world throughout the mid to late 2010s and become popular in civilian markets.

Originally designed to work with caseless ammunition, the Gewehr 36 was the ambitious replacement to the G3 rifle. Introduced in 1997, the G36 has seen extensive use by primarily European countries in Kosovo, Georgia, Yemen, and many other conflicts around the world. In 2022, the German Bundeswehr selected the HK416 as its replacement.

The Tavor was first developed in 1995 for the Israeli Defense Forces to replace the M4 Carbine. While many versions of the platform have been deployed, such as the STAR-21 marksman variant, ultimately the CTAR-21 Carbine became the most widely adopted. In 2009, the IDF announced the new Micro Tavor (aka MTAR-21 or X95) would become the new standard infantry weapon. However, by 2021, Israeli front line units would still use a mix of M4, Tavor, and Micro Tavor rifles.

During the Croatian War of Independence, HS Produkt experimented with a bullpup variant of the AK-47. These developments ultimately lead to the VHS Rifle in 2003 which saw combat in the Syrian Civil War and the war in Iraq. In 2013, HS Produkt announced an updated VHS-2 which was ordered by Croatia and even the United States. This new rifle will be imported to the U.S. under the Springfield Armory as the Hellion.

In 1977, the Czech Army ordered a new rifle under the name Lada to be chambered in the new Russian 5.45x39 cartridge with the goal of replacing their older 7.62x39 rifles. However, after the collapse of the Soviet Union, the Lada project was shelved until the late 90s. Reinvigorated by the prospects of joining NATO, the Czech Republic restarted the Lada program, but rechambered it for 5.56x45. Currently, the Lada rifle, now known as the CZ BREN, is used by many Soviet-influenced countries and has seen extensive combat in Afghanistan and Ukraine.

Based on the AK-200 and AK-400 designs, the AK-12 is the next generation Russian service rifle. While the initial prototype was shown off in 2011, official adoption began in 2018 where the rifle is seeing active service in Ukraine. However, due to budgetary limitations, the AK-74 remains the primary service rifle for the Russian military.

The Avtomat Nikonova model 1994 was developed as a potential replacement for the AK-74. Its claim to fame was its “hyper” burst mode, where two bullets are shot before the operator feels any recoil. However, due to mechanical complexity, the rifle was not adopted for general service in the Russian military. In 1997, the AN-94 was adopted for limited service by the Ministry of Internal Affairs and has seen combat in Crimea and the 2022 invasion of Ukraine.

The ArmaLite AR-50 is a popular 50 BMG single-shot, anti-material rifle. Starting production in 1999, the AR-50 was praised for its mechanically simple design, making it reliable and significantly cheaper than other 50 caliber options. Additionally, the gun's heavy weight and large muzzle break also gives it a surprisingly manageable recoil, making it accurate and user-friendly.

Developed by Barrett Firearms Manufacturing, the Barrett 50 Cal (also known as the Light Fifty) entered service with the Swedish Army in 1989 and the USMC in 1990. The M82 is known by the U.S. military as the Special Applications Scoped Rifle (SASR) and later the M107. A M82A2 bullpup version was also developed, and all versions are still in use as anti-materiel rifles and explosive ordnance disposal tools.

The Italian Benelli M4, or M1014 Joint Service Combat Shotgun in the U.S. military, is a robust beast of a shotgun. It incorporates a special auto-regulating gas system, which allows the M4 to have minimal mechanical components for a semi-automatic shotgun while also reducing weight. Introduced in 1999, the Benelli M4 has been successfully adopted by countries like Italy, the U.S., Israel, South Korea, and many more around the world.

- This weapon has a Smoothbore barrel and Scopes will not affect the accuracy of the gun
- Buckshot is Scattering ammo and ignores size penalty To-Hit small objects

Introduced in 1989, this automatic shotgun gained attention for its distinctive appearance and remarkable firepower. Its select-fire action made it suitable for various purposes such as law enforcement, military, and even civilian use. Notably, the USAS-12's futuristic aesthetics and military associations led to its appearance in movies and video games, but also facing controversies due to concerns over civilian availability.

Kalashnikov Saiga-12

- This weapon has a Smoothbore barrel and Scopes will not affect the accuracy of the gun
- Buckshot is Scattering ammo and ignores size penalty To-Hit small objects

Introduced in the early 1990s in Russia by the Izhmash company, the Saiga-12 is a semi-automatic shotgun based on the famous AK-47 platform. The Saiga-12 was designed for diverse applications, from civilian sport shooting to military and law enforcement use. Its unique feature lies in its adaptation of the AK-style gas-operated system to handle shotgun ammunition. This design trait not only grants it the iconic ruggedness of the AK family but also offers users a versatile and customizable platform. Importantly, the Saiga-12's distinct aesthetic, blending the AK's recognizable silhouette with the shotgun's practicality, has earned it a following in both real-world applications and popular culture.

Emerging in 2001, the Heckler & Koch MP7 is chambered in the unique 4.6x30mm cartridge to satisfy a NATO request for a submachine gun capable of defeating Kevlar body armor. The MP7 has seen widespread adoption by various law enforcement and military units globally, including special forces like Germany's KSK and the U.S.'s Navy SEALs. Its integration into modern combat scenarios attests to its effectiveness in providing operators with a potent, easily concealable, and adaptable tool for diverse operational environments.

The SIG MPX was released in 2015 as an answer to evolving military and law enforcement requirements to accommodate various barrel lengths, calibers, and configurations, enabling adaptability to diverse operational needs. Developed by Swiss firearms manufacturer SIG Sauer, the MPX found a role in modern combat environments due to its enhanced maneuverability and compatibility with accessories. The MPX's integration into tactical units and its appeal to civilian shooters underscore its reputation as a cutting-edge firearm that meets the demands of both professional and recreational users.

- This weapon has a built-in Red Dot Sight and Laser Sight

The FN P90 originates from a NATO call for the replacement of 9x19mm firearms. Designed alongside the FN Five-sevenN pistol and 5.7x28mm NATO ammunition, its development began in 1986 under the name "Project 9.0". This unconventional bullpup firearm features a distinctive top-mounted magazine, fully ambidextrous controls, integrated reflex sight, and integrated laser. Adopted by numerous nations' military and police, including special units and the U.S., ultimately the P90 and 5.7 ammo as a whole was rejected for standard adoption for political reasons fueled by Germany and others in NATO.

The name KRISS is derived from the Indonesian word “keris”, a distinctive dagger and important cultural symbol. Despite the Vector’s insane rate of fire, it has virtually no muzzle climb because of an internal articulating mechanism known as the Kriss Super V. After its debut in 2009, the deadly Vector has been adopted by both the Bangladesh and Royal Thai Army and police forces.

The PP-19 Bizon, created by Izhmash in 1993, was designed for Russian law enforcement and counter-terrorism units. It incorporates a unique helical magazine beneath the barrel capable of holding 64 rounds. After successful trials, the Bizon was adopted into service in 1996 and used by the Federal Security Service (FSB) and Ministry of Justice for operations in the North Caucasus region. However, it has largely been replaced by the PP-19 Vityaz due to reliability issues with the helical magazine.

Adopted by U.S. Special Operations Command in 2003, the FN Herstal Mk 48 is an upscaled and improved Mk 46 Minimi, also known as the M249 SAW, refitted to fire 7.62x51mm NATO. Its lightweight build means the Maximi packs a large punch in a portable package. This makes it ideal for skilled operatives like the Army Rangers and Navy SEALs. Infact, the Mk 48 was used in the 2011 raid that killed Osama bin Laden.

The M27 Infantry Automatic Rifle is an HK416 with accessories requested by the U.S. Marine Corps. The USMC wanted a weapon to replace both the M249 SAW and M16/M4 rifles so the machine gunner could better blend-in in urban environments. In 2009, the HK416 beat the SCAR in competition and was deployed by the USMC in 2011.

The Enfield L86, part of the British SA80 family of firearms, has a history marked by both innovation and challenges. Introduced in the late 1980s, the L86 was designed to serve as a light support weapon, utilizing the same bullpup layout as its infantry rifle counterpart, the L85. However, the L86's journey was marred by reliability issues stemming from its complex gas system and excessive weight. The L86 saw deployment in various conflicts, including the Gulf War and the Iraq War to mixed performance. The L86 was eventually phased out in favor of the FN Minimi light machine gun.

 - Heft Score of original gun increased by 1

In response to the U.S. Army's 2004 requirement for an improved 40mm grenade launcher, Heckler & Koch's XM320 submission was selected in May 2005. It was fielded in July 2009, aiming to replace the M203 by 2015, and was adopted by the U.S. Marine Corps in 2017. The Marines planned to distribute around 7,000 M320 launchers between 2019 and 2022 after initial testing.
