The Glock 17 is the most prevalent model of the Glock family. The Austrian company Glock Ges.m.b.H designed the firearm with a full polymer frame, becoming the first commercially successful pistol of its kind. In 1980, the Austrian military and police force adopted the weapon to replace their WW2-era Walther P38s. Since then, the gun exploded in popularity due to its cheap price and lightweight design. With a wide variety of variations and upgrades, the Glock has cemented itself as a legend in pop culture and firearm history.

Based on the Glock 17 platform, the Glock 18 is a select-fire “beast” variant of the gun. Developed in 1986 at the request of the Austrian EKO Cobra unit, the Glock 18 was developed for counter-terrorist operations and is not available on civilian markets. The select-fire components of the weapon are not interchangeable with other Glock variants.

Adopted in 1985 as a general replacement of the M1911, the Beretta M9 was developed to be a synchronization of sidearms for all five branches of the U.S. Armed Forces, also aligning the U.S. with the NATO 9x19mm standard. While the adoption of the M9 was not totally clean or ubiquitous, when it saw combat in the Iraq War, it found success in urban room to room combat and became an integral part of any soldier's kit.

The Swiss company Schweizerische Industrie Gesellschaft developed the P226 from their previous work on the P220 pistol. In 1984, the P226 competed against the M9 to replace the M1911. While it ultimately lost due to total program costs, the U.S. Navy SEALs later adopted the P226 for special operations. Going into the 21st century, the SIG P226 is widely used by military and police forces all over the world, with major success in the civilian market as well.

In 1975, Česká zbrojovka Uherský Brod (CZUB) introduced the CZ 75 pistol, a testament to Czech engineering amidst political transformation. Distinct for its slide-in-frame design and ergonomic grip, it secured contracts in the 1980s for Czechoslovakia's military and law enforcement. As Czechoslovakia transitioned to the Czech Republic, the pistol endured, inspiring a pistol lineage. While modern forces embraced newer designs, the CZ 75 thrived in law enforcement and civilian domains.

Created by Ivo Janeba in 1991, the CZ-75 Automatic is a fully automatic version of the CZ-75. It was first developed for special military and police units, such as SWAT teams. At approximately one kilo, its light weight makes it unstable. After testing, the Rapid Response Unit of the Police of the Czech Republic rejected it. CZ decided to make a small series anyway, but only 2382 total were made between 1995 and 2007. It is considered a collectible item today.

The Jericho 941 is an imitation of the CZ-75, developed by Israel Military Industries and first imported to the United States in 1990. Despite being imported under the names of Uzi Eagle, Baby Eagle, or Desert Eagle Pistol, it is not related to the IMI Desert Eagle and only bears cosmetic resemblance. You may recognize it as the weapon of choice of Spike Spiegel in *Cowboy Bebop*.

Nicknamed "Deagle", the Desert Eagle is designed by the American firm Magnum Research and originally manufactured by Israel Military Industries in 1984. It employs a gas-operated repeating action similar to the AK-47 rifle. There are three major iterations: the Mark I, the Mark VII, and, most recently, the Mark XIX. A popular prop in movies, TV shows, and video games due to its large size, high caliber, and intimidating appearance, it is rarely used by military or police forces.

The ArmaLite Rifle 15 was a select-fire rifle that competed and lost to the M14 in 1958 to become America's next standard rifle. It was then sold to Colt who converted the design to semi-auto for the civilian market. In 1977, the patent for the rifle expired and numerous companies released their own AR-15 copies. The AR-15 "style" rifle, also known as the Modern Sporting Rifle, now dominates the market, coming in a near uncountable number of varieties with an amazing potential for customization.

The Colt M16A2, developed by Colt's Manufacturing Company, entered the scene in the early 1980s, marking a significant evolution in military rifles. Winning its contract in 1982, it swiftly became the standard issue rifle for U.S. military forces. Notably deployed during the Gulf War in the early 1990s, the M16A2 demonstrated enhanced accuracy and reliability, solidifying its reputation on the battlefield. Its burst-fire mode and improved sights contributed to its performance, and while it eventually evolved into more modern variants, its legacy endures in various armed forces worldwide.

The Enfield L85, also known as the SA-80, was introduced in the late 20th century as a joint project between the Royal Small Arms Factory (RSAF) and Royal Ordnance Factories (ROF). Winning its contract in the early 1980s, it became the standard issue rifle for the British Armed Forces. However, the L85 experienced initial reliability issues during its major deployment in the Gulf War of 1990-1991. Subsequent upgrades in the 2000s by Heckler and Koch improved its performance, and while the L85 has faced criticism early on, its variants continue to serve in the British military, undergoing continuous refinements.

Designed by Yirsrael Galili (born Yirsrael Balashnikov), this rifle doubles as a bottle opener. Soldiers used to use the feed lips of magazines to open bottles in the field, bending the lips and ruining the reliability of the magazine. To spare the magazines, a bottle opener is designed into the handguard of the rifle. It was produced from 1972-1998 based on the Finnish RK 62 and used RK 62 receivers in original production. This gun is featured in the movie HEAT, a movie which was the influence for the game PAYDAY.

The IMI Galil Heavy, born in the late 1960s as a product of Israel Military Industries (IMI), came to prominence as a robust and adaptable rifle. After securing contracts in the early 1970s, it entered the arsenal of the Israeli Defense Forces (IDF) as a response to evolving combat needs. The Galil Heavy's significant deployment occurred during various conflicts in the Middle East, where its reliability and durability shone, proving effective in a range of combat scenarios. The rifle's design, inspired by the AK platform, reflects its heritage while incorporating modern improvements, and it remains in service with several military and police units worldwide.

The FAMAS F1, conceived in the early 1970s by France's MAS company, quickly gained distinction as the French military's primary assault rifle. The FAMAS F1 made its combat debut in Chad during Operation Manta. Its bullpup design offered maneuverability and ease of use, showcasing its strengths in close-quarters during operations. While facing some challenges, including reliability concerns, the FAMAS F1 left an enduring mark on France's military history eventually being phased out in 2017 by the HK416.

The Steyr AUG, an Austrian bullpup assault rifle, was designed by Steyr-Daimler-Puch in the 1960s and adopted by the Austrian Army in 1977 as the Sturmgewehr 77. The AUG replaced the Sturmgewehr 58, a rifle derived from the FN FAL and served as the standard small arm of the Austrian Bundesheer and federal police units. The AUG also has become widely adopted internationally, including importation into the United States in the 1980s. While it was initially banned under the 1989 Assault Weapon Import Ban by President George H.W. Bush, subsequent design changes allowed its re-importation, and after the ban sunsetted in 2004, Steyr Arms collaborated with Sabre Defence to produce parts legally in the U.S.

The AK-74M, developed in 1991 by the Russian manufacturer Kalashnikov Group, is a modernized variant of the iconic AK-47 rifle. Notably chambered for the 5.45x39mm cartridge, the AK-74M offers improved accuracy and controllability compared to its predecessor. Its design enhancements include a side-folding polymer stock and a more ergonomic handguard. As of the 2020s the AK-74 remains standard service assault rifle in the Russian military and is also used by armed forces of countries such as Afghanistan, Belarus, Philippines, Turkmenistan, Ukraine, and Uzbekistan.

The AKS-74U is a compact and versatile variant of the AK-74 assault rifle. Introduced in 1979 by the Soviet manufacturer Izhmash, the AKS-74U is chambered in 5.45x39mm like its parent design. It features a folding stock and a shorter barrel, making it well-suited for close-quarters combat. The U stands for "Ukorochenniy" which is Russian for "shortened". The gun's nickname "Krink" or "Krinkov" has no Russian roots, instead hailing from Afghanistan as the Mujahideen captured many in the Soviet-Afghan War. Russia stopped production of the AKS-74U in 1993 in favor of transitioning to the AK-105, a middle ground between the AK-74U and a full sized AK-74.

The M24 Sniper Weapon System is referred to as a "weapon system" because it consists of not only a rifle, but also a detachable telescopic sight and other accessories. Developed as an evolution of the Remington Model 700, the M24 was adopted by the United State Army, including the Special Forces, Rangers, and Delta Force, as their standard sniper rifle in 1988.

The Springfield Armory M1A traces its origin back to the early 1970s when it was developed as a civilian version of the renowned M14 battle rifle. The M1A retained much of the M14's design heritage, such as being chambered in powerful .308 Winchester (7.62x51mm NATO). Over the years, the M1A gained popularity among civilian shooters, competitive marksmen, and enthusiasts, solidifying its status as a symbol of American firearm design and innovation.

Released in the 1980s by the American company McMillan Firearms Manufacturing, the Tac-50 was designed to fulfill the need for an exceptionally accurate, powerful, and long-range anti-material precision rifle. The Tac-50 has been utilized by various military and law enforcement agencies for counter-sniper operations and long distance engagements. Its legendary status was further solidified in 2017 when a Canadian sniper set the record for the longest confirmed kill at 3,871 yards during the Iraqi Civil War.

While the first known crossbows may have been invented as early as the 5th century BCE, it wasn't until 1966 before the first compound bow was patented. Not to be confused with a composite bow, modern polymer compound bows use a pulley-cam system to achieve mechanical advantage, increasing energy efficiency and decreasing the strength requirements of the user. Because of these advantages, the compound bow has become the ideal pick for hunters and archery enthusiasts.

Designed in 1961, the Mossberg 500 rapidly gained traction in law enforcement circles due to its dependability and cost-effectiveness. In 1987, the M500 was upgraded into the M590A1, which became the standard-issue shotgun for the U.S. military. The Mossberg 500 and M590 shotguns found their way into notable conflicts, including the 1991 Gulf War for supply depot defense and the wars in Iraq and Afghanistan for door breaching. Going into the 21st century, the M500 is being phased out for more modern shotguns like the M4 Benelli and the M26 MASS.

The Remington Model 1100, second only in popularity to the Model 870, was designed to be the ideal semi-auto sport and hunting shotgun. Introduced in 1963, by the 1980s over 3 million units had been produced. Finding tremendous success on the civilian market for home defense and competition shooting, the gun was adopted for police use by U.S. law enforcement.

The SPAS-12, an iconic shotgun, was introduced in 1979 as a combat shotgun for military and police use. Combining pump-action and semi-automatic firing modes, the SPAS-12 offers versatility for various tactical scenarios. Seeing an explosion in popularity after the 1984 Terminator movie, the SPAS-12 found many buyers on the civilian market despite facing strict import laws. While being most well known for its portrayal in media, the SPAS-12 has been seriously adopted by numerous SWAT and special forces teams, as well as seeing combat in The Troubles and the Lebanese Civil War.

Designed in 1981 and later copied in the U.S. and renamed the Street Sweeper, the Striker-12 is a unique revolving cylinder shotgun designed in South Africa as a riot control weapon. It initially saw fighting with the South African army and was later adopted by the Israeli police and People's Army of Vietnam. Because of its distinctive appearance, the Striker has appeared numerous times in popular media garnering it a reputation as a futuristic shotgun.

Roughly equivalent to a 6 gauge shotgun, the KS-23 was designated by the Soviet Ministry of Internal Affairs as a Special Carbine intended for the suppression of prison riots. The “carbine” designation came from the fact that the barrel was rifled. Originally, KS-23 barrels were intended to be 23mm aircraft cannons, but due to manufacturing flaws, they were cut down and repurposed to fire slugs. In civilian markets, the KS-23 is known as the TOZ-123 and because of the gun’s substantial caliber, it has garnered media attention and a particular interest from enthusiasts.

The H&K MP5, an iconic submachine gun, was introduced in 1966 seeing widespread adoption by military, law enforcement, and special operations units worldwide. The MP5 was intended to meet a demand for a compact and reliable weapon for close-quarters combat. Still being produced to this day, the MP5 has seen combat in a multitude of modern conflicts such as the Ukraine War, the Gulf War, and most recognizable during the Iranian Embassy Siege in London in 1980. Counter Terrorist organizations worldwide praise the MP5 for its reliability and compact firepower.

The Colt 9mm SMG is heavily based on the M16A2 platform with a modified UZI magazine for feeding 9mm instead of the standard 5.56 round. Because of the compact design, the most popular M635 variant found great success with the U.S. Marines, DEA, and SWAT teams while the M633 was nicknamed the “Department of Energy” for its use by the DOE to protect nuclear power plants. The M635 went on to be exported to the Argentinian, Indian, and Israeli militaries.

Introduced in 1987 as a replacement for speciality carbines like the AK-74U, the AS Val featured an integrated suppressor and the specialized 9x39mm subsonic ammunition. The minimal noise and reduced muzzle flash of the AS Val made it ideal for special forces and clandestine operations. Since its introduction, it has seen combat use in almost all modern Russian conflicts such as the Chechen wars, Syria, and other special military operations.

Introduced in 1986 as a scaled-down variant of the iconic Uzi design, the Micro-Uzi it was intended to offer a highly portable and effective submachine gun for special forces, law enforcement, and security personnel. Notable for its smaller size and lighter weight compared to the original Uzi, the Micro-Uzi compactness made it suitable for close-quarters combat and concealed carry situations. While the Micro-Uzi didn't see extensive military use, it gained popularity in law enforcement and security circles due to its firepower in a compact package.

Originating in 1984 as the Interdynamic MP-9, it was initially intended to be an inexpensive submachine gun for use by the South African apartheid government. Ultimately, this fell through and the gun was exported internationally under the new name TEC-9, seeing success for better or worse because of the ease of conversion from semi-auto to full automatic fire. After its use in the Cleveland and Columbine School massacres, the weapon became heavily regulated and associated with criminal activity.

Developed by Gordon Ingram and introduced in 1970, the M-10, or colloquially the MAC-10, is a submachine gun renowned for its compactness and high rate of fire. The MAC-10 was initially developed as a lightweight weapon for use by special forces in the Vietnam War and was later adopted by counter-terrorism units for close-quarters combat. In addition to the Vietnam War, the MAC-10's distinctive appearance and role in popular culture continue to make it a recognizable icon.

The M240 is the U.S. version of the FN MAG, a design from the 1950s attempting to merge the sturdy Browning Automatic Rifle action with the reliable feed mechanism of the MG-42. Adopted by the U.S. in 1977, the M240 is the standard infantry machine gun for NATO countries and has seen extensive use in nearly all modern military conflicts. Initially only developed as a vehicle mounted replacement for the M60, the popularity of the gun led to portable versions being adopted by infantry squads as the M240 Bravo.

Originally developed in Belgium as the FN Minimi, the design began as a lighter version of the FN MAG but was later redesigned to fire 5.56 to meet U.S. needs. The Minimi was adopted en masse by the U.S. and redesignated the M249 Squad Automatic Weapon. Introduced in 1984, the M249 SAW quickly replaced the aging Vietnam-era M60. Its lightweight design and smaller caliber compared to its predecessor made it more maneuverable and flexible in various combat scenarios. The M249 SAW played pivotal roles in conflicts such as the Gulf War, Iraq War, and Afghanistan War, earning its place as a dependable and essential asset on the modern battlefield.

Based on and developed in parallel with the AK-74 platform, the RPK-74 was reinforced with modifications like a longer barrel, bipod, and extended magazine. With the Soviets switching their rifles from 7.62x39 to 5.45x39, the RPK-74 would be the gun to adapt their light machine guns to the new caliber. First seen combat in the Soviet-Afghan War, the weapon has and is currently being extensively used in many modern conflicts, particularly in former Soviet countries.

Designed in South Africa and first introduced in 1983, the MGL was built to substantially increase the potential firepower of an infantry squad compared to single-shot grenade launchers. While bulkier, the MGL garnered interest and was exported to militaries and law enforcement agencies from over 50 countries including the U.S. Marine Corp, Ukraine, and others. Seeing combat in the Rwandan Civil War, the U.S. War on Terror, and many other modern conflicts, the MGL has been proven to be a powerful tool in the right hands.
