The Colt Single Action Army M1873, also known as the Colt Peacemaker or simply the Single Action Army (SAA), is an iconic and historic revolver introduced by Colt's Manufacturing Company in 1873. Designed by William Mason and Charles Brinckerhoff Richards, this firearm played a vital role in the American West during the late 19th century, becoming one of two firearms to earn the nickname "The Gun That Won the West." The SAA was prized for its accuracy, durability, and reliability, making it a favorite of cowboys, lawmen, outlaws, and military personnel of the era. It remains one of the most iconic handguns in history and is highly sought after by collectors, maintaining its status as a symbol of the American frontier and the Wild West.

The Smith & Wesson Model 3, later referred to as the Schofield revolver because of improvements made by Major George W. Schofield, was introduced to the U.S. Army in the 1870s. The Model 3 featured a top-break design, allowing for rapid reloading and ejection of spent cartridges and was favored particularly by dragoons and other cavalry men. In 1871, the Russian Empire mass ordered the Schofield allowing the revolver to see action as late as the First World War. While it was eventually overshadowed by the Colt Single Action Army, the Smith & Wesson Model 3 remains a symbol of the Old West and the American Indian Wars.

Known as either the Model 1871 or 1872 due to its design deriving from multiple patents, the Open Top was one of Colt's first dedicated metal cartridge revolvers, as opposed to a conversion of existing caplock revolvers. Submitted to the U.S. Army in the already in-use 44 Henry caliber, the design was ultimately rejected. The Army needed something with more punch, leading the design to evolve into the legendary Colt Single Action Army using the more modern 45 Colt caliber. While unsuccessful in its bid with the Army, the Open Top revolver would go on to be manufactured in the thousands cementing itself in Wild West folk history.

Based on the successful Remington M1858, the Improved Army or Frontier Army was designed to compete with the Colt Single Action Army by updating the revolver from percussion cap to metal cartridges. However, the Colt design had beaten the M1875 to most of the Army contracts, so Remington shifted to exports and the civilian market where it found success with ~30,000 units produced until 1889.

Known as the Self-Cocking Central Fire Revolving Pistol and known for being the first successful U.S. based double action revolver, the M1877 came in three variations. “Rainmaker” used a light 32 Long Colt ammunition, “Lightning” was 38 Long Colt and the most popular variant, and “Thunderer” was a heavier 41 Long Colt. While Colt himself was mistrustful of double action revolver designs, after his passing in 1862 the Colt company released the M1877 and while the design was criticized for being complex, the gun saw commercial success with over 160,000 produced.

One of the most legendary guns to go by the name Derringer or Double Derringer, the Model 95 began production in 1867 and didn't finish its run until as late as 1935. The design was wildly popular as an easily concealable self defense weapon. With over 100,000 units made, the Double Derringer also grew a prominent pop culture image as the last ditch weapon of choice for heroes and villains alike.

Known as the Trapdoor rifle, the M1873 is the most popular of a family of breech-loading trapdoor rifles which trace their origin to the Allin Conversion. Post Civil War, the U.S. didn't have the funding to replace their vast quantity of muskets with more modern original designs, instead opting to use the Allin design to convert the old muzzle loaders to trapdoor rifles. While limited in number, this first generation of trapdoor rifles proved successful and led to the adoption of the wholly original M1873 which was the first widely adopted metal cartridge rifle officially replacing the musket. Adopted in 1873, the Trapdoor rifle became an icon of early American Imperialism produced in excess of half a million units fighting in the American India, Spanish American, and Philippine American Wars. Notably, the Trapdoor fought in the Battle of Little Bighorn by Custer's forces and was lauded for being very modern for its time.

Trademarked as Old Reliable, the Model 1874 was one of the most popular Sharps rifle designs of the Wild West. Unlike previous models which were converted caplock rifles, the 1874 was purpose built to fire metal cartridges making it widely popular with frontiersmen particularly as a buffalo hunting rifle. Because of the legendary status of the Sharps due to its prominent Hollywood appearances, replicas are still sold by numerous companies.

First entering service in 1867, the Rolling Block is a family of rifles developed to compete with the Springfield Trapdoor. While considered more advanced than the trapdoor design, the rifle would only be adopted in limited numbers under license as the Springfield M1871. The Rolling Block rifle would find true success in the civilian market and overseas with hundreds of thousands being shipped to the Papal States, Egypt, Britain, Sweden, France, and many more. In these counties, the weapon would be deployed under a wide variety of designations and calibers including more modern cartridges like the 30-40 Krag. Ultimately, the rifle would be made obsolete by the proliferation of bolt action rifles by the turn of the century.

An upsized rifled based on the legendary Winchester M1873, the aptly named Centennial was marketed during the 100th anniversary of the U.S.'s Declaration of Independence. Its larger caliber made it more suitable for big game hunting and at long ranges. While the rifle was never as popular as its contemporaries, similar to the M1873, a limited variant was sold called the "One of One Thousand" which has become one of the most sought after Winchester rifles due to its custom finishes and excellent accuracy.

The quintessential Winchester rifle, the Model 1873 was often referred to as “The Gun That Won The West.” With over 700,000 rifles produced, the Model 1873 was extremely popular with frontiers men, making countless appearances Western stories and films further entrenched its iconic status to this day. While never officially adopted into military service, the weapon was used by both sides in battles between the U.S. and Native Americans.

Entering service with the British Army in 1871, the Martini-Henry is a symbol of the late Victorian British colonial empire. With nearly 1 million units produced, the Martini-Henry saw combat most famously in the Anglo-Zulu War where 139 British soldiers fought back a Zulu army of four thousand in the battle of Rorke's Drift. While being replaced as a standard service rifle by the modern bolt action Lee-Enfield in 1888, the Martini-Henry continued to see service as late as World War I and saw limited use by the Taliban in Afghanistan in the 2010s.

An improvement of the paper cartridge Chassepot design, the Gras was developed to match the British Martini-Henry and German Gewehr 71. Adopted in 1874 by the French Army with an initial production run of half a million units, the rifle was quickly replaced in 1886 by the Lebel rifle. While the Gras saw limited combat with the French as a service rifle, its manufacturing was outsourced to Steyr and exported to countries like Greece where it fought until as late as World War II. Additionally, the gun was updated by the French during the Great War to fire more modern cartridges or was converted into a grenade launcher. While the Gras was short lived as a standard service rifle, it was ultimately produced in higher numbers than the legendary Chassepot it was developed from.

Also known as the Mauser Model 1871 or the Infantry Rifle 71, the Gewehr 71 was adopted for service in the Imperial German Army in 1872. With over 3 million units produced, the Gewehr 71 would be exported around the world seeing combat in places like Argentina, Japan, and Ethiopia. While replaced relatively quickly by smokeless bolt action guns like the Gewehr 88, the Mauser rifle itself was updated to fire more modern spitzer bullets and cycle with an 8 round tube magazine and continued to stick around until as late as the Second World War.

Vetterli Model 1870/87 		Point blank (0-1 Spaces) +4 + Agility

After the Unification of Italy or Risorgimento, the Italian army wanted to update their rifles which were already just conversions of older musket designs. In response, Vetterli produced the original Model 1870 which was a single shot carbine, however, in 1887, the gun got an upgrade to make it cycle multiple shots. While eventually supplanted by the Carcano bolt action rifle, the Vetterli would continue to see upgrades and use by reservists. During the Great War, the Vetterli would be updated to fire 6.5x52 Carcano as well as be exported to Russia and China to fight around the world.

Designed by U.S. Civil War general Hirman Berdan, the Berdan II is a bolt action evolution of the earlier trapdoor Berdan I designed with the assistance of Colt. Bought by Imperial Russia and produced by Russian manufacturers in excess of 3 million units, the Berdan II would serve as the main infantry rifle in conflicts like the Russo-Turkish war where it fought against Ottomans armed with the Martini-Henry. Proving reliable, the Berdan would go on to serve with reservists during the Great War, Russian Revolution, and even early on in the Second World War, only being phased out as the Mosin-Nagant became ubiquitous. In addition to the standard infantry rifle, the Berdan was popular enough that it came in a variety of configurations such as dragoon, Cossack, and cavalry carbines.

A classic frontier weapon, the double barrel shotgun's earliest forms date back to the 18th century as a simple and versatile extension of the age of sail blunderbuss and volley guns. By the late 19th century, double barrel shotguns had advanced beyond flintlock and percussion caps to self igniting shells. While there is no single manufacturer of the double barrel shotgun, the weapon is iconic as a rugged and reliable firearm still seeing wide use to this day.

One of the most rudimentary forms of firearm, the single barrel shotgun is cheap, robust, and reliable, making it great for survival and hunting. While never issued as standard in the military, the single barrel shotgun finds use as a discount gas launcher by law enforcement or by irregular fighters such as in the Battle of Blair Mountain.

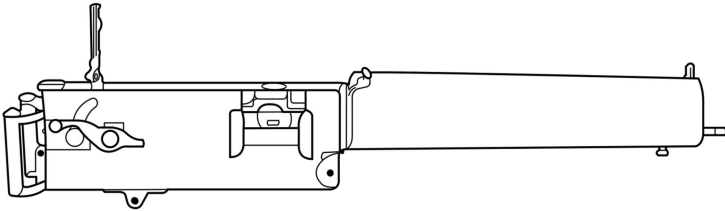

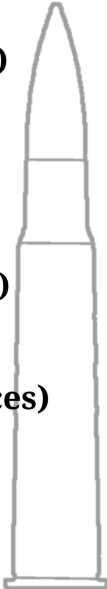

Spencer 1882 		Point blank (0-1 Spaces) +4 + Reflex Close (2-3 Spaces) +4 + Reflex Short (4-6 Spaces) +2 + Reflex Medium (7-10 Spaces) +1 + Focus Far (11-20 Spaces) -4 + Focus Distant (21-60 Spaces) -15 + Focus Extreme (61-100 Spaces) -25 + Focus Every +40 Spaces -10 + Focus

Notable for being the first pump-action shotgun to achieve commercial success, the Spencer 1882 would be well regarded as an effective and advanced design. Unlike later pump action shotguns, the Spencer would use a unique vertical ejector. While satisfying to fire, its mechanical complexity would be its ultimate downfall, forcing Christopher Spencer to lose his company and leave the firearms business for good.

During John Browning's brief partnership with the Winchester Company he assessed that pump-action would be the future of shotgun design. Winchester rebuked this idea asserting that they were a "lever action" company. Thus the Model 1887 lever action shotgun was conceived, hitting the market with over 70,000 units sold and a later M1901 variant developed to fire smokeless powder. In 1991, the M1887 would rekindle its popularity, appearing as the weapon of choice for Arnold Schwarzenegger's Terminator character.

Invented in 1884 by Hiram Maxim, the Maxim gun is most well known for being the first genuine machine gun. Being deployed in Europe's scramble for Africa, the weapon proved reliable and devastating against the technologically disadvantaged native Africans. Beyond Europe, the Maxim was quickly adopted by a variety of armies as a light artillery piece. By the outbreak of World War I, many variations of the Maxim were developed by the major world powers as the base platform developed by Sir Maxim proved to be an incredibly sound design.
